Subspecialist remote radiology reporting services
Delivering Healthier Outcomes

Clinically-led, subspeciality, remote radiology reporting

In recent years, there has been a dramatic upward shift in demand for diagnostic services and, in an always-on culture, an expectation that reporting is delivered efficiently, accurately and securely.

As NHS doctors, we were operating within a system that recognised this escalating demand, especially for subspeciality services, but was struggling to provide the resources to meet it.

We formed DMC Radiology Reporting in 2012 to provide clinically-led, subspeciality remote radiology services, delivered by a community of highly experienced radiologists led by our medical director, Dr Shawn Halpin.

We have always been committed to extending education and learning throughout our sector and, in conjunction with the British Institute of Radiology, have set up an academy dedicated to offering hands-on training courses for the next generation of radiologists.

Our mission was to develop a service that we would want to commission ourselves. We are proud that DMC Radiology Reporting is now a trusted partner to both the NHS and to independent healthcare providers, helping deliver healthier outcomes for patients.

Dr Sujal Desai
MD FRCP FRCR (co-founder)

Dr Simon Padley
BSc MBBS FRCP FRCR (co-founder)
A highly efficient, subspeciality, remote radiology reporting service to augment and complement in-house teams throughout the UK.

Typically reporting within 24 hours, delivery is clinically robust and cost-effective and provides vital second opinion reporting and clinical audit services.

An extensive (50+) team of high calibre, organ-specific, subspeciality experts using the latest light touch technologies, hosted in an N3 data centre, ensuring end-to-end encryption.

An IT system designed and developed in conjunction with industry-leading PACS and RIS provider, Carestream Health, to offer a secure, end-to-end automated workflow.

An enhanced, client focused, auditing system to mitigate against radiologist discrepancies, and ensure radiologist reporting precision.

The first teleradiology organisation to set up a training academy operated in partnership with the British Institute of Radiology (BIR).
Delivering Healthier Outcomes

DMC Radiology Reporting is part of the DMC Healthcare family, which also provides primary and urgent care and community services. It has more than 50 years’ experience of working with the NHS and the independent sector to provide high quality, sustainable care to more than 300,000 patients every year.
